

Assignment -1

Assignment Date	28 September 2022
Student Name	Snehaa Sree J V
Student Roll Number	311519205057
Maximum Marks	2 Marks

Question-1:

Create a registration page in html with username, email and phone number and by using post method display it in next html page.

register.html

```
<html>

  <head>

    <title>Registration page</title>

    <link rel="stylesheet" href="{ {url_for('static', filename='register.css')}}">

  </head>

  <body>

    <div class="center"> <br /><br />

    <form action="/register" method="POST">

      <h1>Register</h1> <br /><br />

      <p> Enter username:</p>

      <input type="text" name= "username" />

      <p> Enter email:</p>

      <input type="email" name="email"/>

      <p> Enter Phone number:</p>

      <input type="text" name="phone"/>

      <br></br></br>

      <input type="submit" value="submit" />

    </form>

  </div>

</body>

</html>
```

register.css

```
.center{
margin: auto;
width: 10%;
}
h1{
text-align:center;
}
input{
border-radius:5px;
padding:7px;
}
```

home.html

```
<html>
<head>
    <title>Home</title>
</head>
<body style="text-align:center">
    <h2>Welcome {{username}} </h2><br/><br/>
    <b>Username</b> - {{username}}<br/><br/>
    <b>Email Address</b> - {{email}}<br/><br/>
    <b>Phone number</b> - {{phone}}<br/><br/>
</body>
</html>
```

Register.py

```
from flask import Flask,render_template,request
app=Flask(__name__)
@app.route("/")
def home():
    return render_template("register.html")
```

```
@app.route("/register",methods=["POST","GET"])
def register():
    if request.method=="POST":
        username=request.form.get('username')
        email=request.form.get('email')
        phone=request.form.get('phone')
        return render_template("home.html",username=username,email=email,phone=phone)

if __name__ == '__main__':
    app.run(debug=True)
```

Output:

Question-2:

Develop a flask program which should contain atleast 5 packages used from pypi.org.

Packages used:

1. render_template
2. url_for
3. redirect
4. request
5. abort

Program :

app.py

```
from flask import Flask,render_template,request,redirect,url_for,abort
```

```
app=Flask(__name__)
```

```
@app.route("/")
```

```
def home():
```

```
    return render_template("register.html")
```

```
@app.route("/register",methods=["POST","GET"])
```

```
def register():
```

```
    if request.method=="POST":
```

```
        username=request.form.get('username')
```

```
        email=request.form.get('email')
```

```
        phone=request.form.get('phone')
```

```
        if username=="admin":
```

```
            return redirect(url_for("admin_page"))
```

```
        return render_template("home.html",username=username,email=email,phone=phone)
```

```
@app.route("/admin")
```

```
def admin_page():
```

```
    return render_template("admin.html")
```

```
@app.route("/validate",methods=["POST","GET"])
```

```

def validate_admin():
    if request.method=="POST":
        password=request.form.get('password')
        if(password=="abcd"):
            return render_template("admindashboard.html")
        else:
            abort(403)

if __name__ == '__main__':
    app.run(debug=True)

```

register.html

```

<html>
<head>
    <title>Registration page</title>
    <link rel="stylesheet" href="{{ url_for('static', filename='register.css') }}">
</head>
<body>
    <div class="center"> <br /><br />
    <form action="/register" method="POST">
        <h1>Register</h1> <br /><br />
        <p> Enter username:</p>
        <input type="text" name= "username" />
        <p> Enter email:</p>
        <input type="email" name="email"/>
        <p> Enter Phone number:</p>
        <input type="text" name="phone"/>
        <br></br></br>
        <input type="submit" value="submit" />

```

```
        </form>

    </div>

</body>

</html>
```

home.html

```
<!DOCTYPE html>
