## Project Design Phase-II Technology Stack (Architecture & Stack)

| Date          | 15 October 2022                    |
|---------------|------------------------------------|
| Team ID       | PNT2022TMID28003                   |
| Project Name  | Project - Plasma Donor Application |
| Maximum Marks | 4 Marks                            |

## **Technical Architecture:**

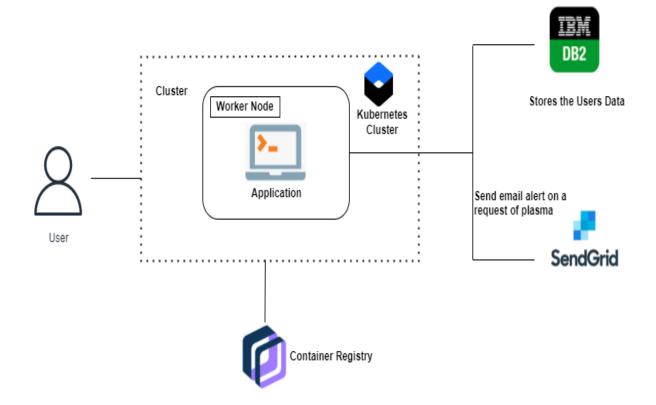

Table-1 : Components & Technologies:

| S.N | Component                       | Description   | Technology            |
|-----|---------------------------------|---|-----------------------|
| 0   |                                 |   |                       |
| 1.  | User Interface                  | How user interacts with application using Web UI  | HTML, CSS, JavaScript |
| 2.  | Application Logic-1             | New User registers in the application by giving the genuine contact details which will be stored in the database.                   | Python flask          |
| 3.  | Application Logic-2             | Users login into the application by providing the username and password   | Flask, IBM DB2        |
| 4.  | Application Logic-3             | Stats page displays the blood unit count available and the number of donors available for each blood group for which I need Plasma. | IBM Watson Assistant  |
| 5.  | Database                        | String,Integer,Characters,Long  | IBM DB2               |
| 6.  | Cloud Database                  | Database Service on Cloud   | IBM DB2               |
| 7.  | External API-1                  | Authentication  | Flask                 |
| 8.  | External API-2                  | Sending requests to donors  | Sendgrid              |
| 9.  | Infrastructure (Server / Cloud) | Application Deployment  | Kubernetes            |

**Table-2: Application Characteristics:** 

| S.N | Characteristics          | Description   | Technology   |
|-----|--------------------------|---|--|
| 0   |                          |   |  |
| 1.  | Open-Source Frameworks   | List the open-source frameworks used  | Docker, Kubernetes                                       |
| 2.  | Security Implementations | List all the security / access controls implemented, use of firewalls etc.  | Doctor Content Trust(DCT),Transport Layer Security (TLS) |
| 3.  | Scalable Architecture    | Justify the scalability of architecture (3 – tier, Micro-services)  | Docker   |
| 4.  | Availability             | use of load balancers   | Kubernetes   |
| 5.  | Performance              | Since Docker and Kubernetes are used the traffic load will be managed efficiently as a result of which the web application's performance would be much better | Docker and kubernetes                                    |
